## maXbox on Linux

Posted on [January 6, 2019](#)[August 14, 2019](#) by [maxbox4](#)

Running maXbox on Linux is easy with the help of Wine in 4 steps.

Wine (originally an acronym for "Wine Is Not an Emulator") is a compatibility layer capable of running Windows applications on several POSIX-compliant operating systems, such as Linux, macOS, & BSD.

If you are running an Ubuntu derivative, you'll find Wine located in the Software Center. Chances are, however, that version is outdated. You can install it on the shell, so open a terminal and become su on most linux distributions:

1. >>> sudo apt-get install wine or Suse: sudo zypper in wine

when you are not in sudoers group try simply\_ >>> su instead of sudo

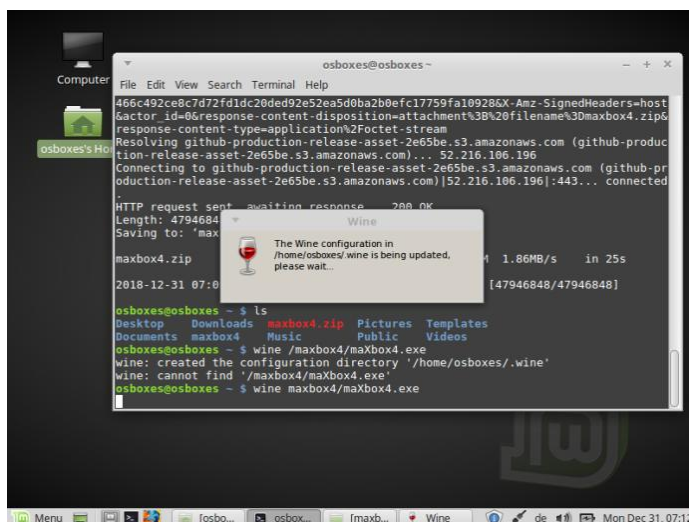

Then you can change the directory to /Public as > cd Public and get maXbox binaries:

2. >>> wget <https://github.com/maxkleiner/maXbox4/releases/download/V4.2.4.80/maxbox4.zip>  
(<https://github.com/maxkleiner/maXbox4/releases/download/V4.2.4.80/maxbox4.zip>)

Next step we unzip the files, if the unzip command isn't already installed on your system, then run:  
sudo apt-get install unzip

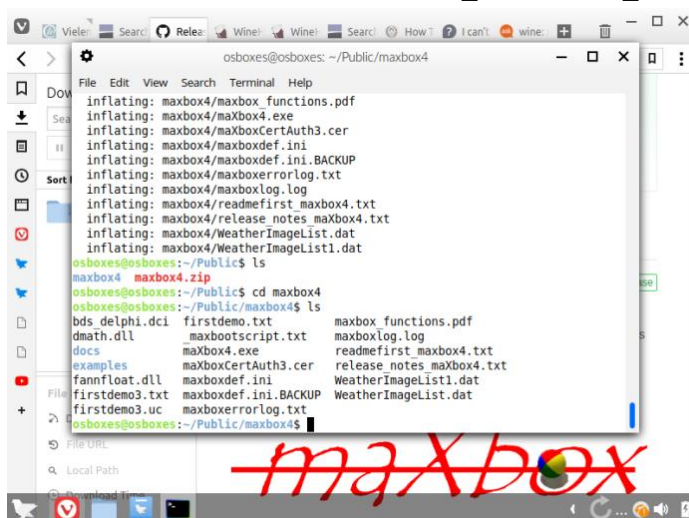

After installing the unzip utility, if you want to extract to a particular destination folder, you can use  
(unzip file.zip -d destination\_folder) :

3. >>> osboxes@osboxes:~/Public\$ unzip maxbox4.zip

(<https://maxbox4.wordpress.com/2019/01>)

/06/maxbox-on-linux/virtualbox\_linuxmint\_winemaxboxupdate31\_12\_2018/)

(<https://maxbox4.wordpress.com/2019/01>)

/06/maxbox-on-linux/virtualbox\_fedora28\_04\_01\_2019\_12\_27\_25\_maxboxunzip/)

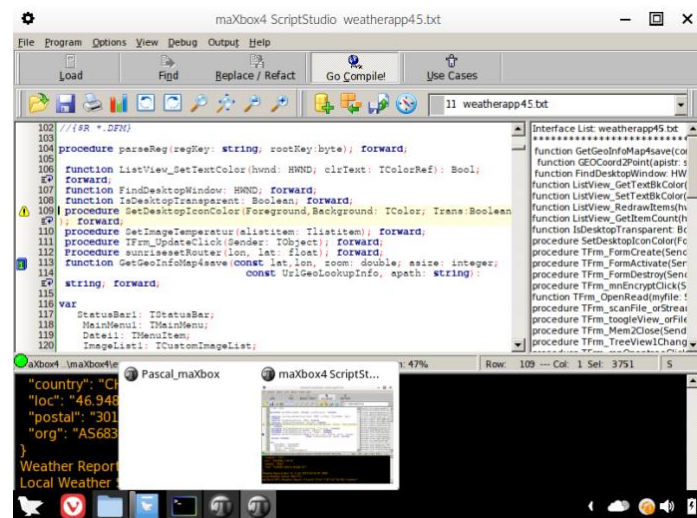

Last step is to start maXbox itself with the command <wine>:

4. >>> osboxes@osboxes:~/Public/maxbox4\$ wine maXbox4.exe

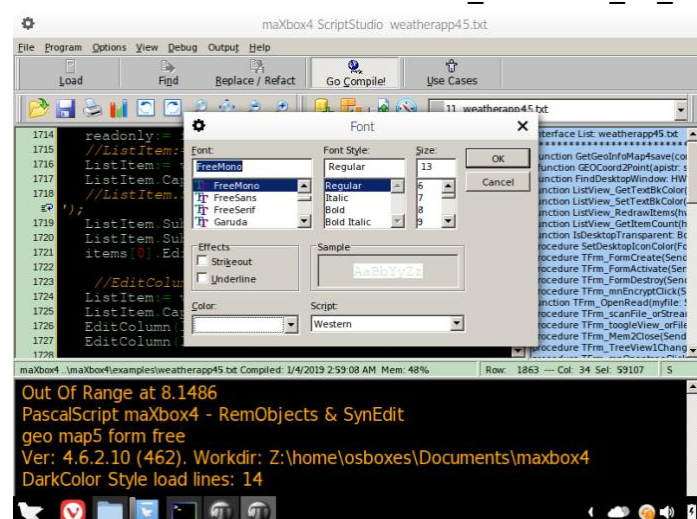

then a configuration update is made (see screenshot); you will be asked to install mono or gecko but you don't need .Net mono or gecko for maXbox.

You can optimize font with for example /options/edit font and set freemono, change the font and check in ini file by maxboxdef.ini.

In a program is running to slow then set in Menu/Options/ProcessMessages! to Off.

([https://maxbox4.wordpress.com/2019/01/06/maxbox-on-linux/virtualbox\\_fedora28\\_04\\_01\\_2019\\_08\\_57\\_49\\_maxboxicons/](https://maxbox4.wordpress.com/2019/01/06/maxbox-on-linux/virtualbox_fedora28_04_01_2019_08_57_49_maxboxicons/))

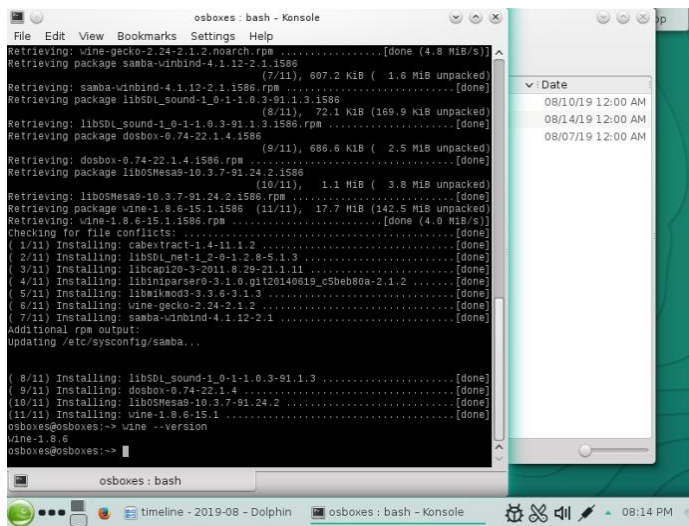

([https://maxbox4.wordpress.com/2019/01/06/maxbox-on-linux/virtualbox\\_fedora28\\_04\\_01\\_2019\\_09\\_14\\_31\\_freemono/](https://maxbox4.wordpress.com/2019/01/06/maxbox-on-linux/virtualbox_fedora28_04_01_2019_09_14_31_freemono/))

That's it. Wine is now ready to help you install and run also other Windows applications. Most of them you must install but maXbox runs out of the box, just unpack the zip and start with wine, that's fine. Remember, however, that not every application will work.

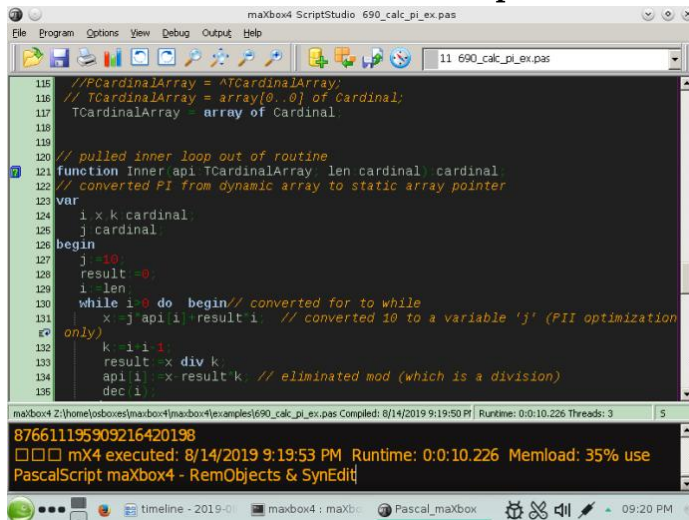

openSUSE is a free and Linux-based operating system for PC, Laptop or Server. The openSUSE project is a community program sponsored by Novell. It is a general purpose operating system built on top of the Linux kernel, developed by the community-supported openSUSE Project and sponsored by SUSE and a number of other companies.

Desktop Icons on a Raspi Disappeared After Upgrade:

After updating, upgrading and rebooting my Pi, the desktop icons disappeared so is the raspberry desktop wallpaper.

Solution:

`sudo apt-get install libgdk-pixbuf2.0-dev``sudo gdk-pixbuf-query-loaders --update-cache`

then it can propose:

`dpkg --configure -a`

reboot

or `sudo dpkg --configure -a``sudo reboot`**3. REPLY ▸****maxbox4** says:**August 13, 2019 at 9:20 pm Edit**
